Subject: ULTRATECH Arbor System

Michael,

As you know, we installed the ULTRATECH arbour in the first week of February 2004. While we recognized that this arbour could help in the reduction and or stabilization of our deviation, the maintenance benefit is what we found intriguing.

I am happy to report that we have seen a 50% reduction in maintenance time using the ULTRATECH arbour. No more spending countless hours hammering, using pullers or even burning to remove the old sleeves. We now just open the saw box and remove the end plate, and then just pull the sleeves right off by hand. It has truly been a time saver.

For your information, we have just installed a new edger and will soon be converting this arbour to the ULTRATECH system as well.

Best regards,

Cam Weber
